Freedom at your fingertips

SmartSteer

Classic - Premium

Freedom at you fingertips with Smartsteer

The SmartSteer steering device enables you to operate vehicle functions such as wind-screen wipers, indicator and lighting etc. easily and safely while at the same time keeping control of the steering wheel. SmartSteer has been developed, so that it is possible to operate the functions, whatever position the steering wheel is in.

SmartSteer is suitable for both right-handed and left-handed drivers. The ergonomic design provides good grip and support, making driving more comfortable and pleasant. The function keys can be operated easily with minimal effort. You have the option of illuminating the function keys, making SmartSteer easy to operate even in the dark.

If SmartSteer is no longer required, it can be easily removed by means of a quick-release button, so that other drivers are not affected. The original controls remain operational.

SmartSteer can be installed in almost any car (including hybrid and electric vehicles). Because of our extensiveoptions with Classic 5 and 8 and Premium 5 and 8, there is always a steering device to suit you.

Battery

In both variants, the red illuminated function keys on the indicators warn you well in advance, if the battery needs to be replaced.

Steering wheel adapter

Steering wheel adapter with quick release button to easily remove the SmartSteer, if not used.
